

Farm Name Date

In order to complete your Vet Invest report, we have summarised some of the key features of where your vet service and medicine investment has been directed over the last year or so and how that compares with other similar farms. We have also looked at how this spend has changed with time.

Looking at the four quarters ending with quarter 4 of 2017.

| Investment over the last four quarters | £57,632.30 |
|--|------------|
| Total discount awarded over the last four quarters | £4,544.82 |
| Investment after discount | £53,087.48 |

Our data suggests that cow numbers* for female cattle

24 months and older is

540

Total milk sold in last four quarters 4,935,700 litres Milk sold per cow in last four quarters ** 9.140.19 litres

Your investment with us is estimated at *** 1.08 Pence per litre

Therefore your estimated investment per cow^j is £98.31

^{*}According to BCMS data.

^{**}To calculate: divide milk sold over last 4 quarters by cow numbers

^{***} To calculate pence per litre: Multiply the investment after discount over last four quarters by 100, then divide by the milk sold figure

j after any discount

Comparing investment over the past few years (Year 3 is the most recent 12 month period)

How investment on this farm compares with other similar farms: (This benchmarking data was calculated using the average of the last two years worth of data)

How this investment compares with the five farms on either side:

How your ppl compares with other farms:

Another way to see where your farm sits within other farms

The graphic above illustrates the range of money spent in each product area for all farms in the benchmark group. The 'whisker' lines show the range from maximum to minimum amounts invested in each product category. The blue 'box' shows the range of half the farms either side of the farm with the middle amount invested. There is a line in the middle of the box at the point where the middle farm (median) invests.

There is a dot at the average (mean) of all farms.
